

NEW PelletPro™ WETTING APPLICATOR
GUN NOW FEATURED BY UNDERHILL

ALISO VIEJO, CA

PelletPro™, a new wetting agent applicator gun for golf courses and sports fields, is now available from Underhill, a manufacturer of irrigation products for natural and synthetic turf. Pellet Pro accepts professional-grade surfactant cartridges and features a high-flow nozzle with a vertical water curtain for uniform surfactant application throughout the entire spray pattern. Delivering approximately 35 gallons per minute, PelletPro™ efficiently applies wetting agents over large turf areas more precisely and in less time than conventional equipment. Pellet rotation within the chamber evenly dissolves all surfactants.

The ultra-durable Cyclone™ nozzle is constructed with brass fittings, stainless steel nozzle and precision-engineered glass-filled materials for years of heavy-duty performance. Nozzle and flow control valve can be removed and used independently.

Underhill offers an expanding line of irrigation products for superintendents and contractors, including 2Wire control systems, Magnum™ and Precision™ hose-end nozzles, traveling Tracker™ portable irrigation and FCIProfile™ stainless steel rotor replacement nozzles for golf courses.

Underhill also features the M-160, a 160-foot-radius pop-up sprinkler designed to irrigate or syringe sports fields with natural or synthetic turf.

For more information about the new PelletPro™, call Underhill toll free at 866-863-3744 or see the complete catalog of products online at www.underhill.us. The company is headquartered in Aliso Viejo, CA, and has been in business for more than 25 years.
