

NOZZLES

Why Golf Superintendents Are Switching to Profiles

Extend the Life of Your Toro or Rain Bird System

Eliminate Soggy Spots and Dry Patches

Improve Distribution Uniformity

Switch Out OEM Nozzles in Minutes

“The difference was night and day. We’re converting the entire course. Compared to a \$2 million dollar system overhaul, the Profile Nozzle switch-over was worth it.”

**Joel Kachmarek, Superintendent
Tacoma Country and Golf Club**

“Installation only took a few minutes per head. These nozzles give you better results for the golfers, and that’s what it’s all about.”

**Bill Swancutt, Superintendent
Illahe Hills Country Club**

“After testing solid metal Profile Nozzles we saw great results and decided to switch all 1,100 Toro heads to Profiles.”

**Doug Norwell, Superintendent
The Camargo Club**

“We initially ordered 100 Profile nozzles and installed them on our worst fairways. Distribution uniformity improved dramatically. We converted 950 full-circle and 45 part-circle heads to Profile nozzles.”

**Adam Bagwell, Superintendent
Crane Creek Country Club**

Manufactured from solid brass and stainless steel, Profile nozzles are specifically designed for Rain Bird and Toro golf sprinklers. Tests conducted by the Center for Irrigation Technology (CIT) at California State University, Fresno, demonstrated that Profile nozzles improve golf course irrigation distribution uniformity while reducing water usage by as much as 20 percent.

BEFORE PROFILE NOZZLES

WITH PROFILE NOZZLES

“Profile metal nozzles have become a practical and relatively inexpensive solution to improving distribution uniformity without the expense of replacing a golf sprinkler or its internal mechanism.”

**Brian Vinchesi, President
Irrigation Consulting, Inc., Pepperell, MA and Huntersville, NC**
