

ROLLERPRO TAKES CARE OF DRY SPOTS,
NEWLY-SEEDED TURF ON SPORTS FIELDS,
PARKS AND OTHER LARGE SITES

LAKE FOREST, CA

RollerPro™, a portable sprinkler base with solid brass impact sprinklers, is now available from Underhill International.

RollerPro provides supplemental irrigation to dry spots and newly-seed turf on sports fields, cemeteries, parks and other large sites. The portable sprinkler base includes a 22" wide stainless steel roller and works with both ¾" and 1" hoses. The weighted design of the RollerPro provides a stable field position and prevents movement during use.

The brass Underhill impact sprinklers are featured in six models, ranging from 13 to 54 GPM. Full and part-circle heads offer 57' to 96' of coverage (at 80 psi) and have ¾", 1" and 1 ¼" MPT inlets.

All Underhill sprinklers also have stainless steel drive springs and chemical-resistant bearing seals for lasting durability and value.

RollerPro sprinkler base and impact heads are sold separately.

For more information about RollerPro, visit the Underhill website at www.underhill.us or call 866-863-3744.

Underhill offers an expanding line of irrigation products for sports fields, commercial and residential installations, including 2Wire Decoder systems, LiquidPro and Pellet Pro wetting agent applicators, MicroEase low volume kits, Magnum and Precision hose-end nozzles, and FCI Profile stainless steel hose-end nozzles.

The company is headquartered in Lake Forest, CA, and has been in business for more than 28 years.
