

NEW UNDERHILL LIQUIDPRO™ APPLICATOR
EVENLY DISTRIBUTES WETTING AGENTS,
FERTILIZERS AND MICRONUTRIENTS

LAKE FOREST, CA

LiquidPro™, a new applicator gun for wetting agents, fertilizers and micronutrients, is now available from Underhill International, a manufacturer of irrigation products for golf courses and sports fields.

Weighing only 3 lbs, the lightweight LiquidPro is easy to use, UV-protected and chemical resistant. The applicator kit is constructed from quality components, including a patented Precision Cloudburst™ nozzle; high-flow composite/stainless steel valve; chemical-resistant siphon/mixing system; and high-density poly-bottle with one-quart capacity.

LiquidPro covers 1,000 square feet of turf in less than a minute with speed and uniformity. The applicator works with both ¾" and 1" hoses (a brass 1" FHT x ¾" MHT adapter is included). As a bonus, a powerful 48 gpm syringing nozzle can easily be assembled with LiquidPro's Cloudburst nozzle and valve.

Constructed from aircraft aluminum and stainless steel, patented Cloudburst nozzles are designed for durability while evenly distributing additives. New pistol-grip valve design with textured handle provides a comfortable handle and reduces operator fatigue.

The liquid chamber features a venturi siphon with needle valve so that proper amounts of wetting agent mix with water flow. An adjustable metering dial offers 10 additive settings, including "water only." The metering dial can be removed to prevent tampering with a predetermined setting.

LiquidPro's high-density poly-bottle features easy-to-read measurements in both fluid ounces and milliliters. Additional 32-oz. poly-bottles can be ordered in supplemental 6-packs and save time by transporting other additives to the site.

For more information about Underhill's LiquidPro, visit the website at www.underhill.us or call toll free: 866-863-3744.

Underhill offers an expanding line of irrigation products for golf courses and sports fields, including 2Wire™ control systems; Pellet Pro™ wetting agent applicators; Magnum™ and Precision™ hose-end nozzles; CoolPro™ cooling nozzles; DeepDrip™ tree watering stakes; Gulp™ Series pumps; Hose Tap™ adapters; Nastek™ stress detection glasses; and FCI Profile™ stainless steel golf rotor nozzles.

The company is headquartered in Lake Forest, CA, and has been in business for more than 28 years.
